Small skier triggered slides in Northern Bridgers

Hardscrabble Peak Bridger Range 11/12/2020 Code HS-ASu-R1-D1 Latitude 45.91510 Longitude -110.98100 Notes

On 11/12, two small slides were reported in the Northern Bridger Range near Fairy Lake, at least one of which was skier triggered.

The skier triggered <u>slide</u> was "a <u>wind slab</u> approximately 50 X 50' with a 6" crown. The <u>slab</u> itself was only about 4" thick and only slid about 5" down the slope before stopping, and I was able to stop and then turn around and ski off of the <u>slab</u> without it moving any further. The 4" of dry <u>slab</u> was sitting on about 3" of sugary snow that was on a very firm icy bed surface."

We don't have details on the other <u>slide</u>, but it was reported as a <u>wind slab</u> avalanche on the NE side of Pomp Peak.
