

# Natural Avalanche in Beehive Basin

Beehive Basin  
Northern Madison  
11/19/2022  
Code  
SS-ASu-R1-D1.5-G  
Elevation  
9000  
Aspect Range  
WSW  
Latitude  
45.34070  
Longitude  
-111.39100  
Notes

My partner and I were skinning up a west-facing slope in Beehive Basin when we stopped out of the wind at a large rock outcrop.

Shortly after stopping to re-assess, a small, wind-deposited, pocket of snow popped off the rock face above us triggering a soft-[slab slide](#) which gained momentum and stepped down through a rocky choke, fanning out in the open face below the rocks, before coming to a stop directly at our skis.

We witnessed no additional natural avalanches that day or found any significant instabilities in the snowpack on adjacent slopes. We can only attribute our near-miss to luck, if the avalanche had occurred five minutes before we stopped (while skinning across the slope), or five minutes after (while continuing upslope to our desired objective), our day might have ended quite differently.

Number of slides  
1  
Number caught  
0  
Number buried  
0  
Avalanche Type  
Soft slab avalanche  
Trigger  
Skier  
Trigger Modifier  
u-An unintentional release  
R size  
1  
D size  
1.5  
Bed Surface  
G - Ground  
Problem Type  
Wind-Drifted Snow
