

Large Natural Crown on N. Saddle of Electric Pk

Date

Sat, 03/18/2023 - 14:05

Activity

Skiing

Large avalanche crown across the east facing saddle off the north side of Electric Peak. Roughly around 10,500 ft, around 800 feet across the crown, looked to have broke around 1-2 feet deep and would guess it happened in the last few days. Lots of active wind loading happening.

Region

Southern Gallatin

Location (from list)

Electric Peak

Observer Name

Koby Gordon
